Profile Summary

I am a 2nd-year Computer Science student developing proficiency in Python and SQL. Passionate about data science, data and business analytics, actively working on foundational projects including a basic price recommendation extension. Eager to leverage a fundamental understanding of data processing, Azure and OpenAI to learn rapidly and drive data-informed decisions in a dynamic internship role.

Skills

- **Programming Languages** : Python (Core Concepts), Java (OOP Concepts), C
 - **Tools & Platforms** : Git, GitHub, VS Code
 - **Areas Of Interest** : Data Science, Business Analytics, Data Processing, Prompt Engineering
 - **Soft Skill** : Analytical Thinking, Rapid Learning, Team Collaboration
-

Projects

- **Comp-Ex 2026 (VCMDWA)**
During a one-month internship, I engineered a comprehensive full-stack event management ecosystem for Compex 2026, central India's largest tech fair. Using React, Node.js, Express and MongoDB, I built a secure attendee registration portal, a real-time admin dashboard for live check-ins, and automated database scripts, ensuring a seamless and high-performance experience for both users and organizers.
- **Stock Price Trend & Forecast Tool (Academic Project)**
Built a Basic Python-based financial analysis script to fetch live market data and evaluate short-term stock trends using Moving Averages (MA10, MA20 , EMA10) . Implemented a baseline ARIMA time-series forecasting model to project next-day closing prices . Utilized AI development tools to generate and debug the Python logic.
Tech Stack : Python (Pandas, Scikit-Learn) , Statsmodels , yfinance API
- **Product Price Recommendation Extension (In Progress)**
Currently developing a Product Pricing Recommendation browser extension using Python and OpenAI to analyze product data and deliver actionable pricing insights. By designing the core logic and leveraging AI tools for rapid prototyping and debugging, I am actively applying my academic knowledge of data structures to build a practical, real-world business analytics engine.
- **ClearImpact: NGO Transparency & Donor Engagement Ecosystem**
Built a data-driven donation platform to solve trust deficits in the nonprofit sector, utilizing Anandwan as a foundational case study. Architecting features to bridge the gap between financial contributions and ground-reality impact, ultimately improving internal financial management and scaling recurring donor support.
